I. Terminology:
   A. LAWN. Local Access Wireless Network
   B. Supported Device. A supported device is any computer that has been recommended by Information Technology and is supported by a software image. The image maintains standard software, virus protection, spyware protection, and allows for remote control support.
   C. Unsupported Device. An unsupported device is any computer brought to campus by employees, students, or other campus visitors that does not meet our current hardware specifications. This also includes computers that were once supported but have gone beyond the timeframe of support.

II. Use of Funds
   A. Funds generated through any of the fees in this policy will be applied to the debt reduction of the LAWN account until the debt is paid.

III. Degree-Seeking Students
   A. Self-installed Connection. If the student is able to follow the instructions that we provide without Information Technology direct involvement, there will be no cost for service. This applies to all degree-seeking students.
   B. Assisted Installation of Connection. A fee of $25.00 will be assessed if Information Technology needs to install or configure the device to work on the LAWN. The device may need to be left with Information Technology and configured as time allows.
   C. A form is provided at http://wireless.nnu.edu for the student to register, along with complete instructions for finding the device's MAC address. Students must register the device's MAC address on the system before the connection will be made to their wireless device.

IV. Employees
   A. Supported Devices. Employees using a supported (managed) computer that is capable of wireless access to our system may use the NNU Open wireless service for free.
   B. Unsupported Devices. Employees wishing to access the wireless network from an unsupported device may register for no charge. This service is not encrypted.

V. Guests and non-degree-seeking students.
   A. Self-installed. Guests will be charged a fee of $5 per day or $20 per week for access on the wireless network. (This service is not encrypted.)
   B. Assisted Installation. A fee of $25 will be assessed if IT (or the Technical Response Center) needs to install or configure a guest's device to work on the LAWN.

VI. Groups.
   A. Events wishing to provide their patrons with wireless access may choose to have each individual pay (as a guest under the above policy), or they can choose designated enrollment times.
   B. Each two-hour enrollment period will cost $100 for each group of up to 50 people. This means that our staff would be present at a registration table for two hours and collect MAC addresses and hand out instructions for the event attendees. Event organizers must notify Information Technology at least one week in advance for this service.
